You'll see the steps for KYC in the following subsection.

### How to Complete Binance KYC on the Mobile App

The verification phase (KYC) is the most crucial stage in Binance registration. You can't transact or exchange currencies on Binance without completing this phase.

1. Fill the Identity Information fields appropriately and tap Continue to proceed.
2. Supply your residential address, postal code, and city name in the provided fields. Then tap Continue.
3. Next is the document selection page. Tap Other Documents to see a list of other accepted documents. Select one of these and tap Continue.

## Identity Verification

Select your document issuing country/region

 Nigeria

**Use a valid government-issued document**

Only the following documents listed below will be accepted, all other documents will be rejected.

 **Bank Verification Number (BVN)** 

Quickest Option

 **National Identity Number (NIN)** 

Other Documents 

Continue

4. If the selected document type requires scanning, ensure that your camera covers all angles. Then avoid a low-light environment. Otherwise, enter the ID number in the given field. Tap Continue.

5. Once this phase is successful, the app will take you to the facial recognition stage. Tap Begin Verification. The AI might ask you to tilt your head, blink, or smile at some points. Follow these instructions carefully.

6. Remove any hat or glasses and avoid using a camera filter at this point. Also, ensure enough illumination in the surrounding area and place your smartphone vertically upright. You might even ask someone to help you with the back camera for a better result.

## How to signup/create wallet on Trustwallet

Step 1: Visit Playstore or Applestore and search for Trust wallet

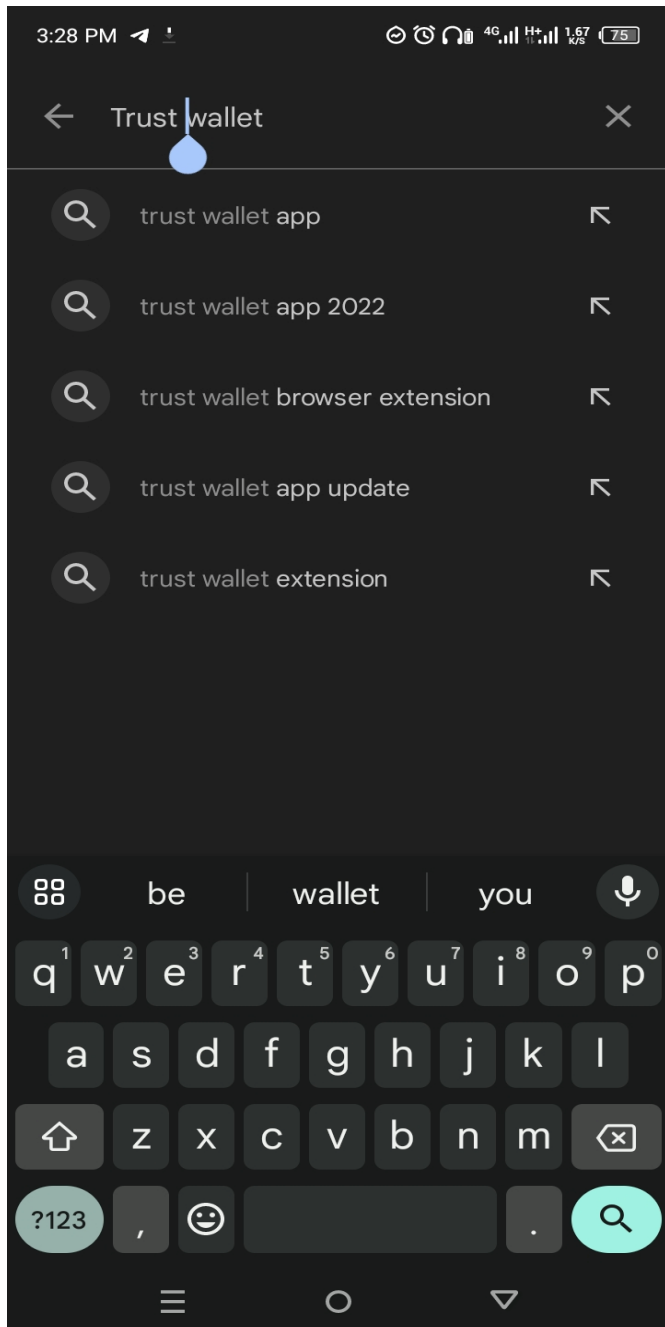

Step 2:

Install the Trust wallet app by clicking on the “Install button”

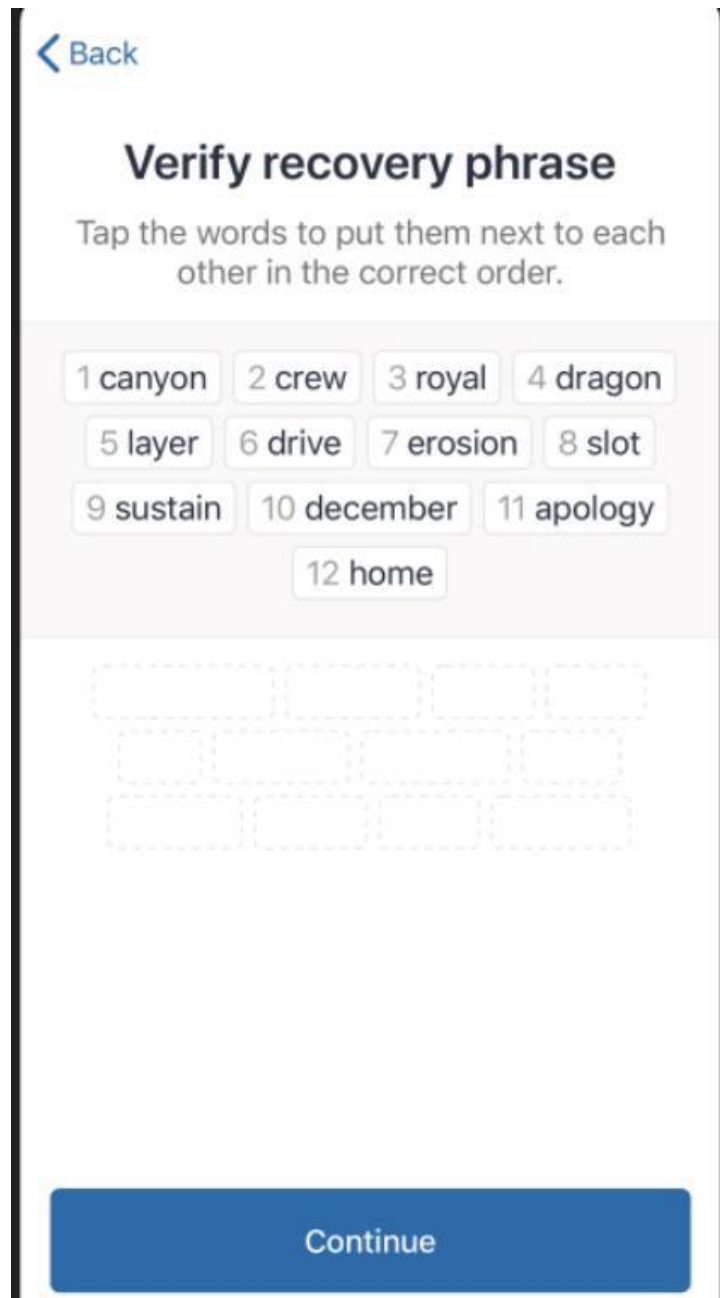

After installation, then click on “Open”

You will be taken to this page.

Step 3: Click on “Create a New Wallet”

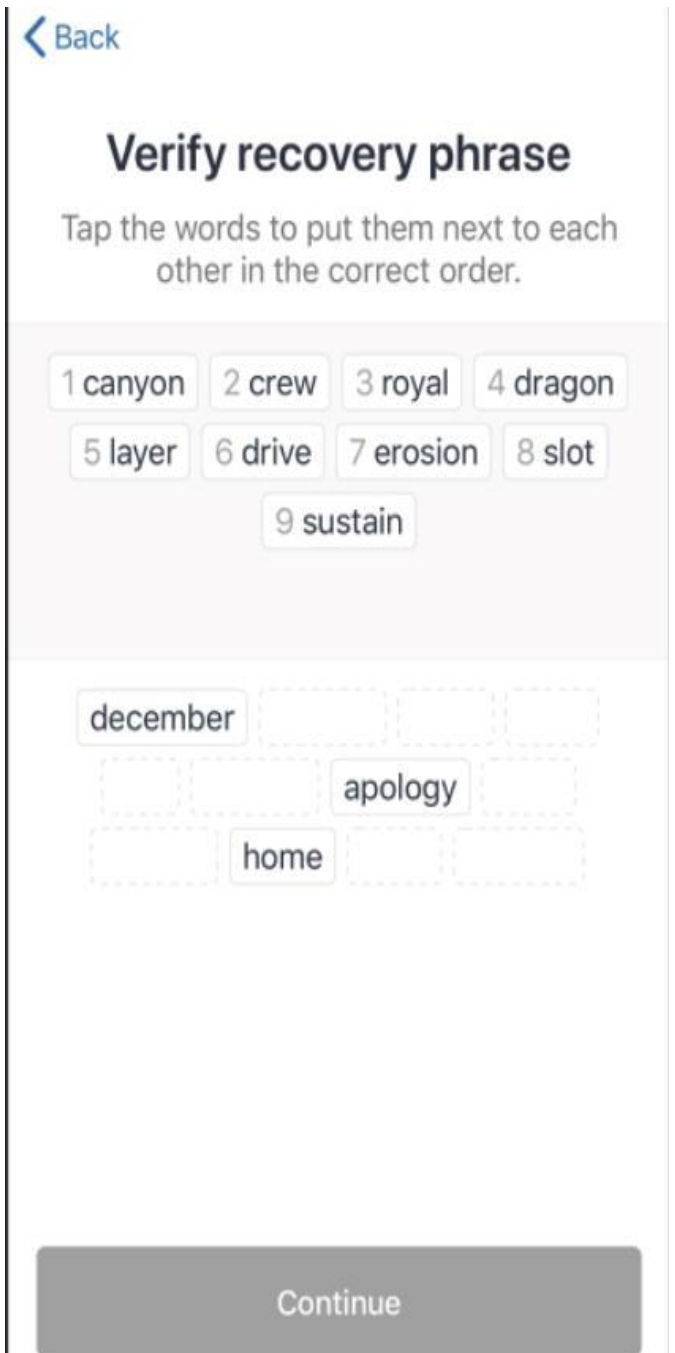

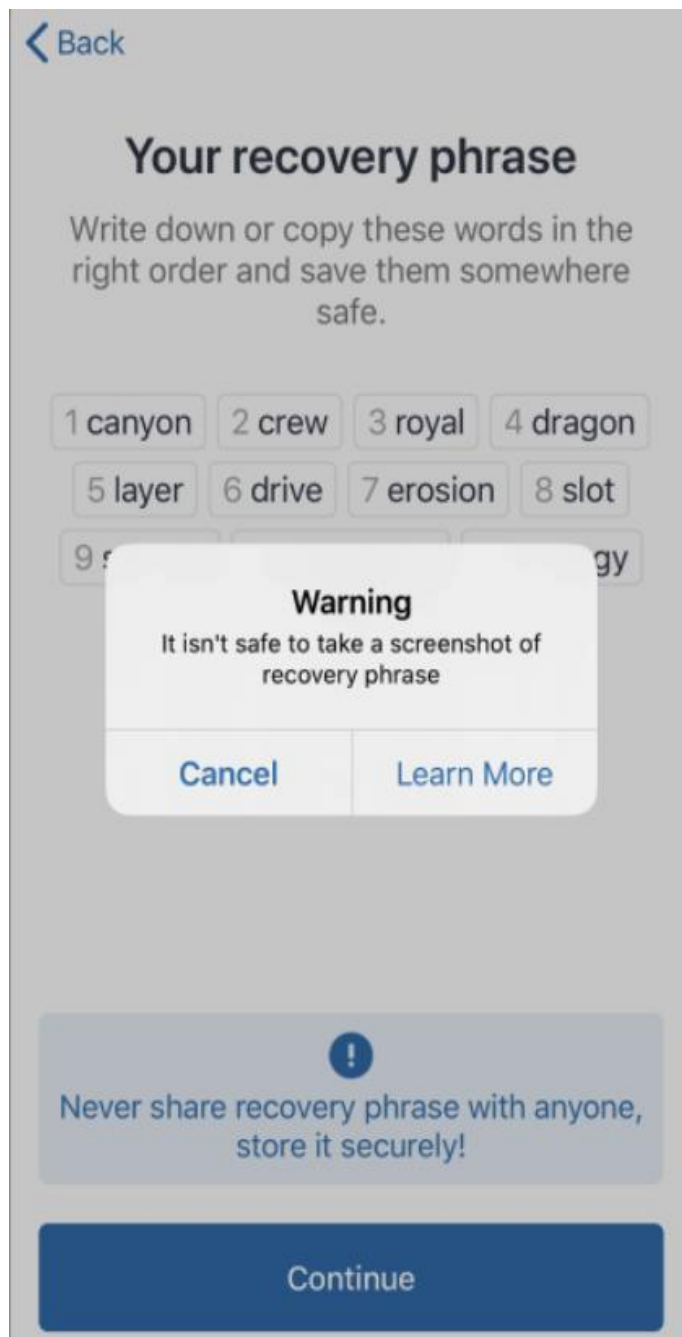

Note: If you already have a wallet, you can click on the “I already have a wallet” and input your passphrase

Step 5:

Your recovery phrase will be displayed for you.

Note: this discovery phrase is your key to your wallet any day and any time. Once hacker or a friend gets hold of the key, they can sweep your wallet with ease. With this passphrase you can log in to your wallet on any device, so it is advisable to keep it in a safe place.

Click on continue

Step 6:

Enter the keys as they were given to you above.

[< Back](#)

## Your recovery phrase

Write down or copy these words in the right order and save them somewhere safe.

1 canyon

2 crew

3 royal

4 dragon

5 layer

6 drive

7 erosion

8 slot

9 sustain

10 december

11 apology

12 home

[Copy](#)

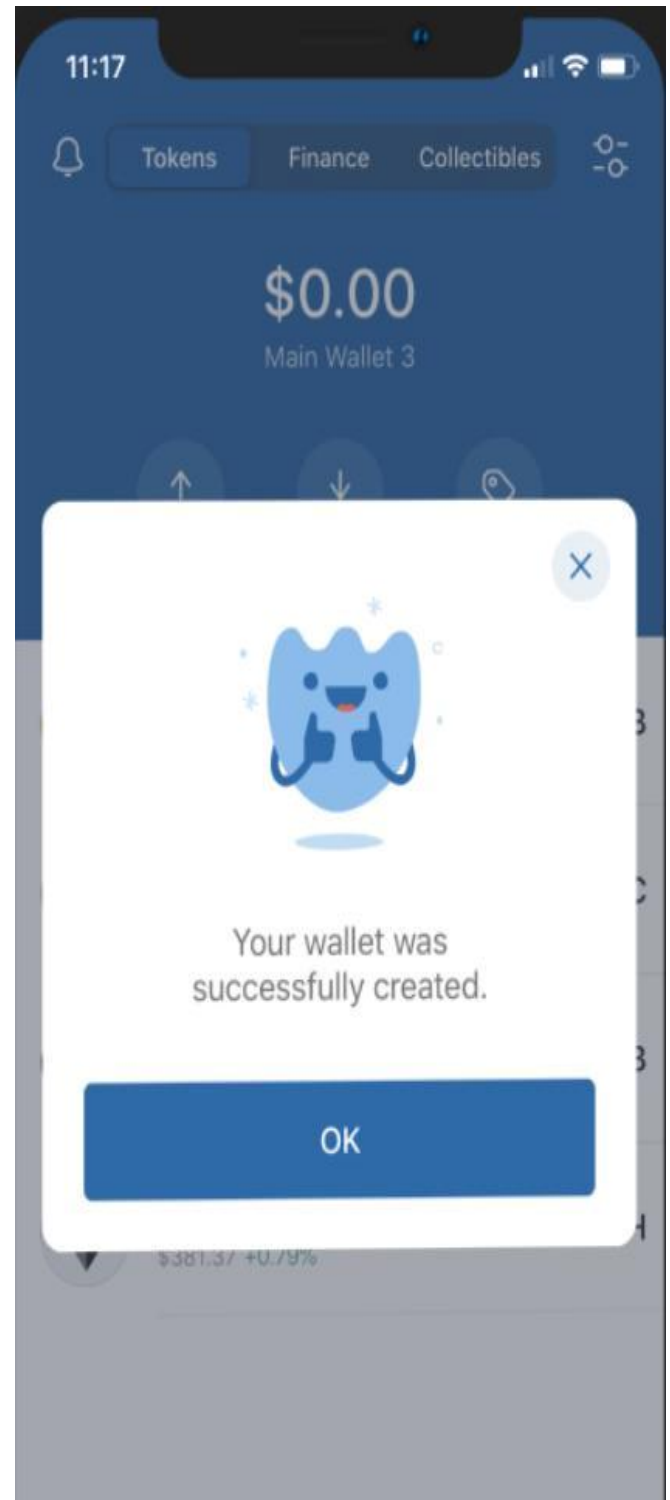

!

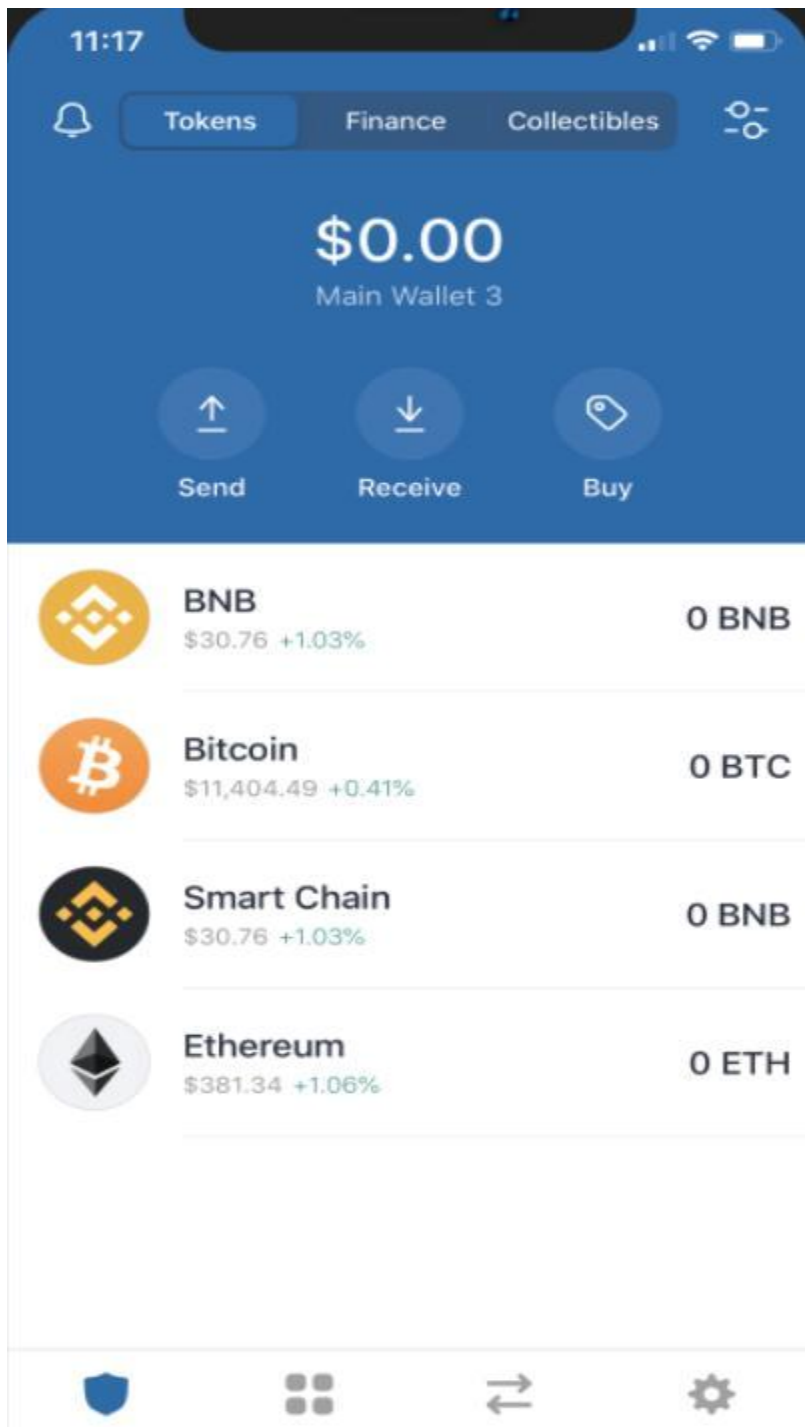

Never share recovery phrase with anyone, store it securely!

Continue

When done, click continue

Step 7: A congratulatory message will be displayed as follows. Kindly click on ok to continue

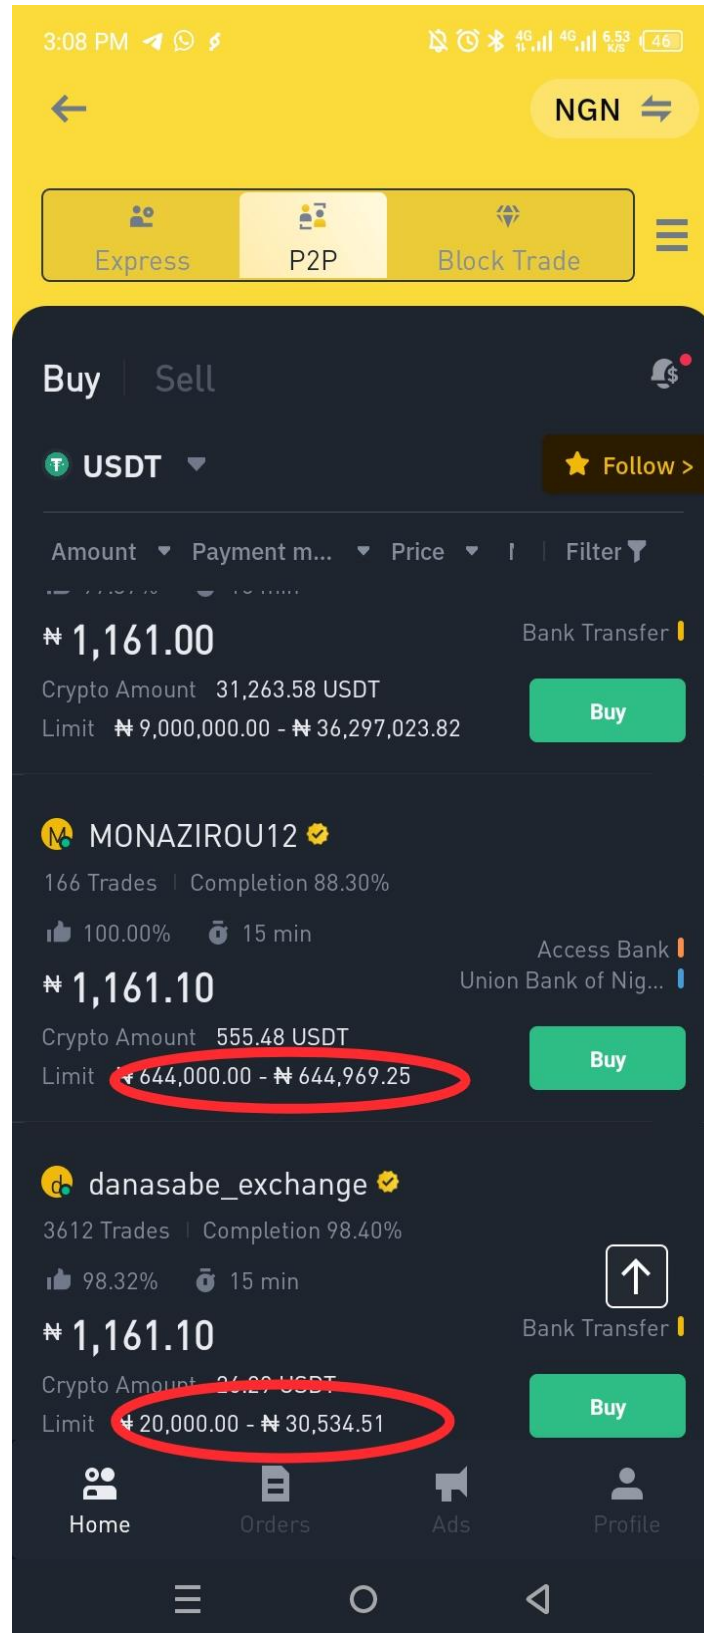

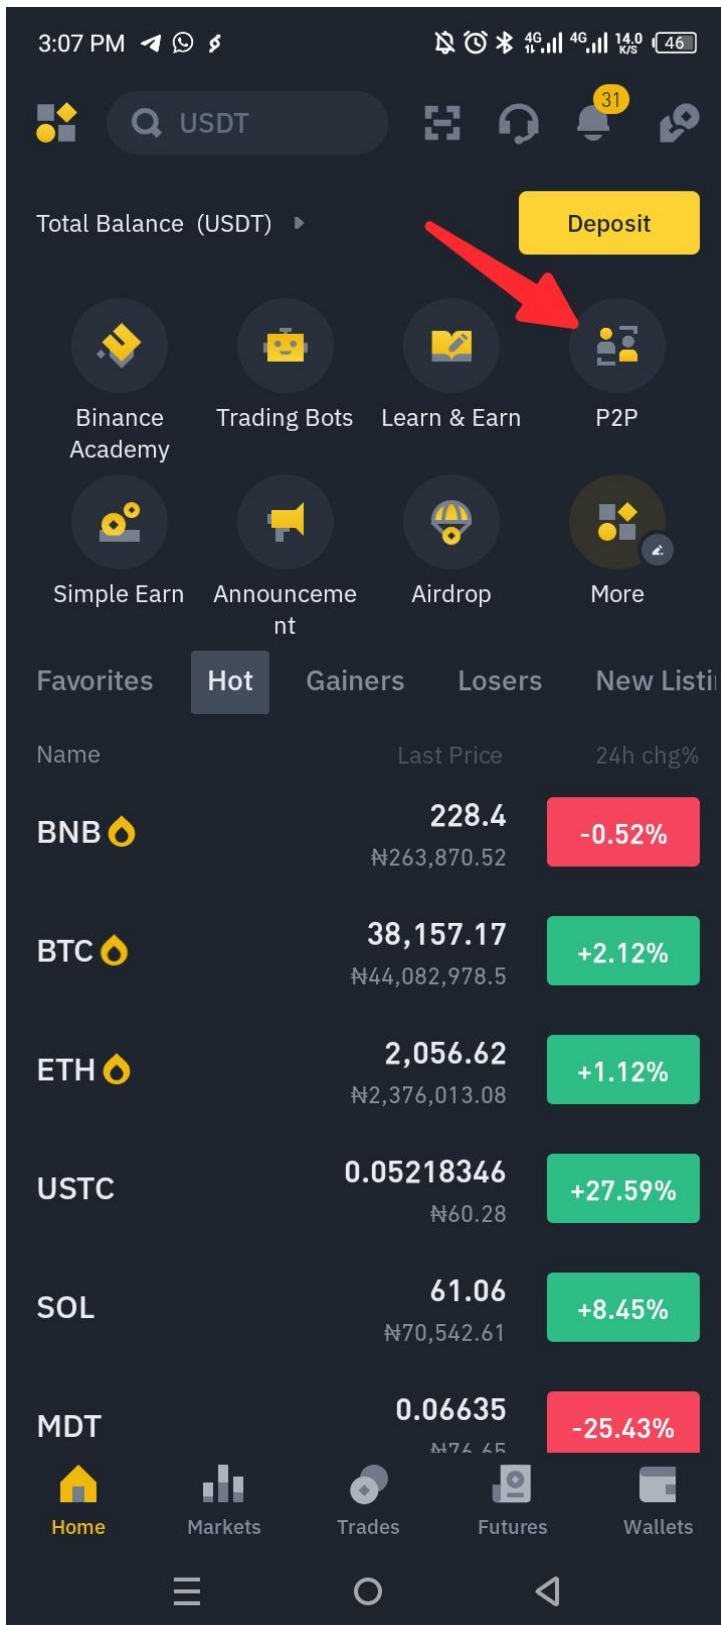

Congratulations you have just successfully created a wallet.

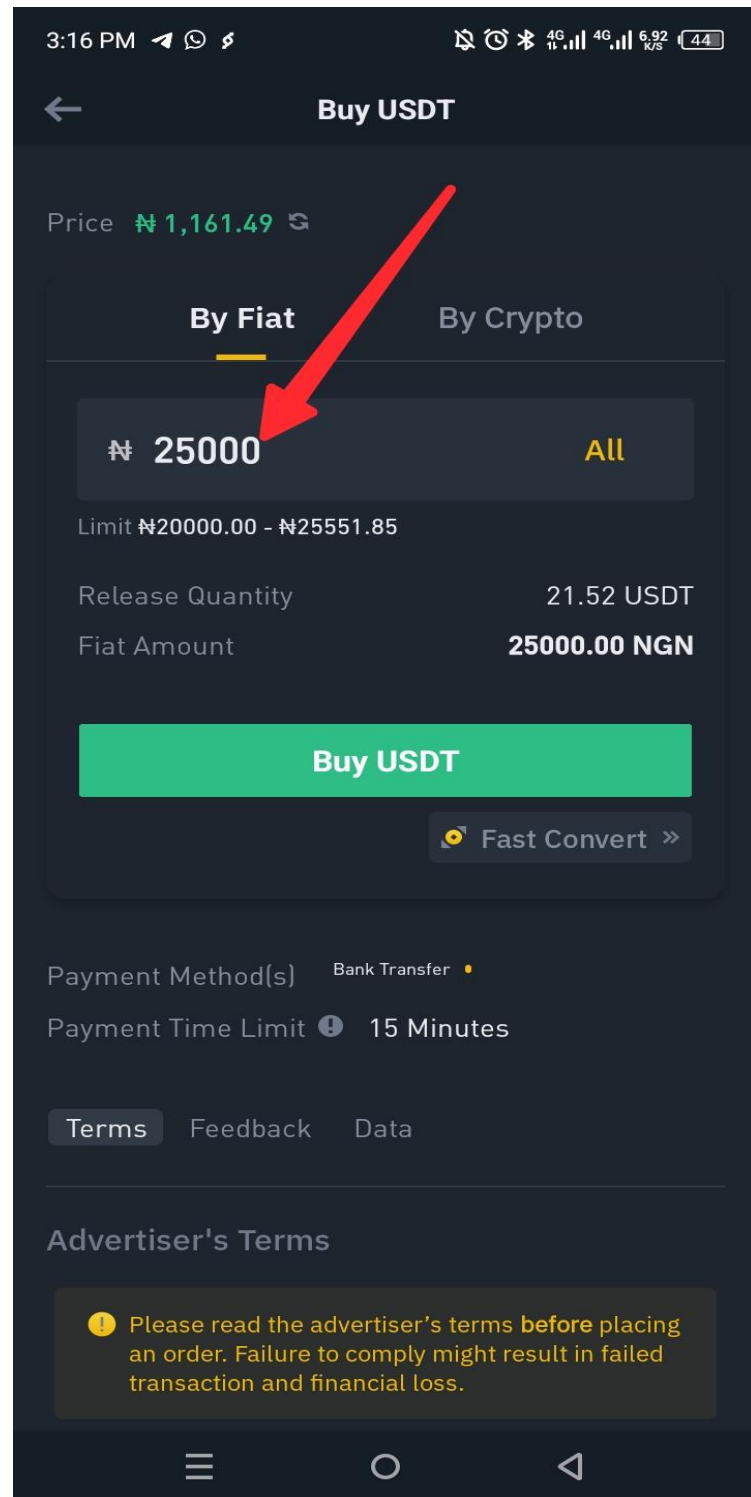

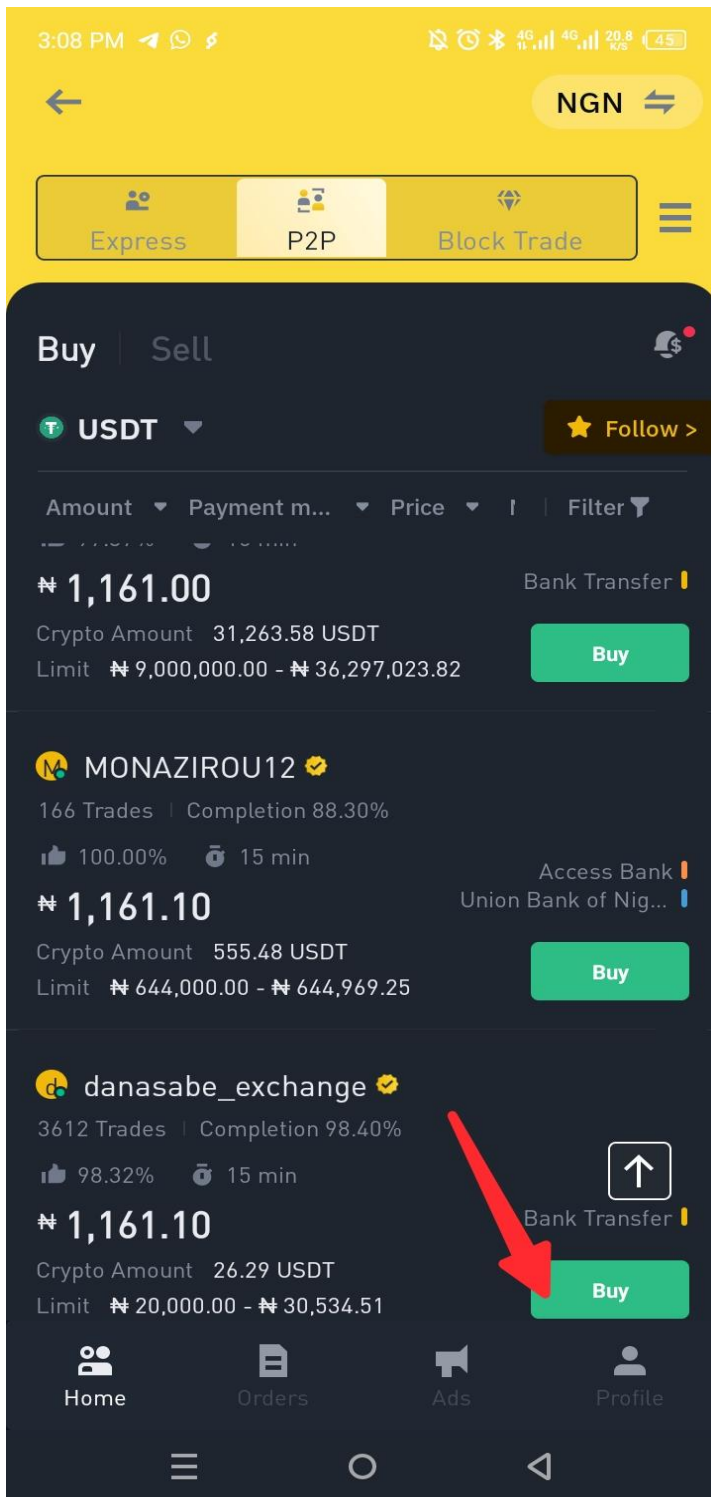

## How to Fund your binance account using P2P

Step 1: Login to your binance app or webpage and click on More or P2P on the home screen

A list of all the p2p merchant will be displayed following their buying and selling margin size.

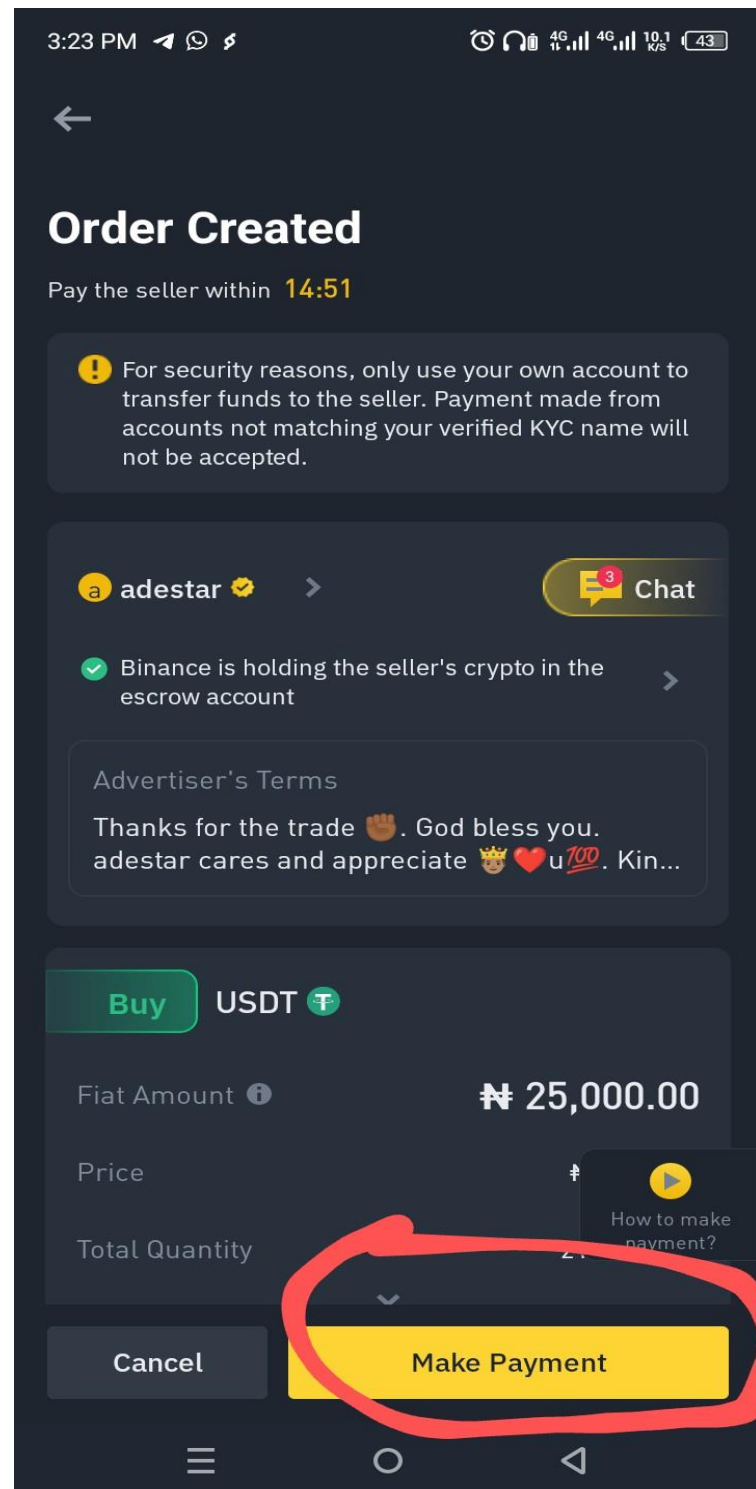

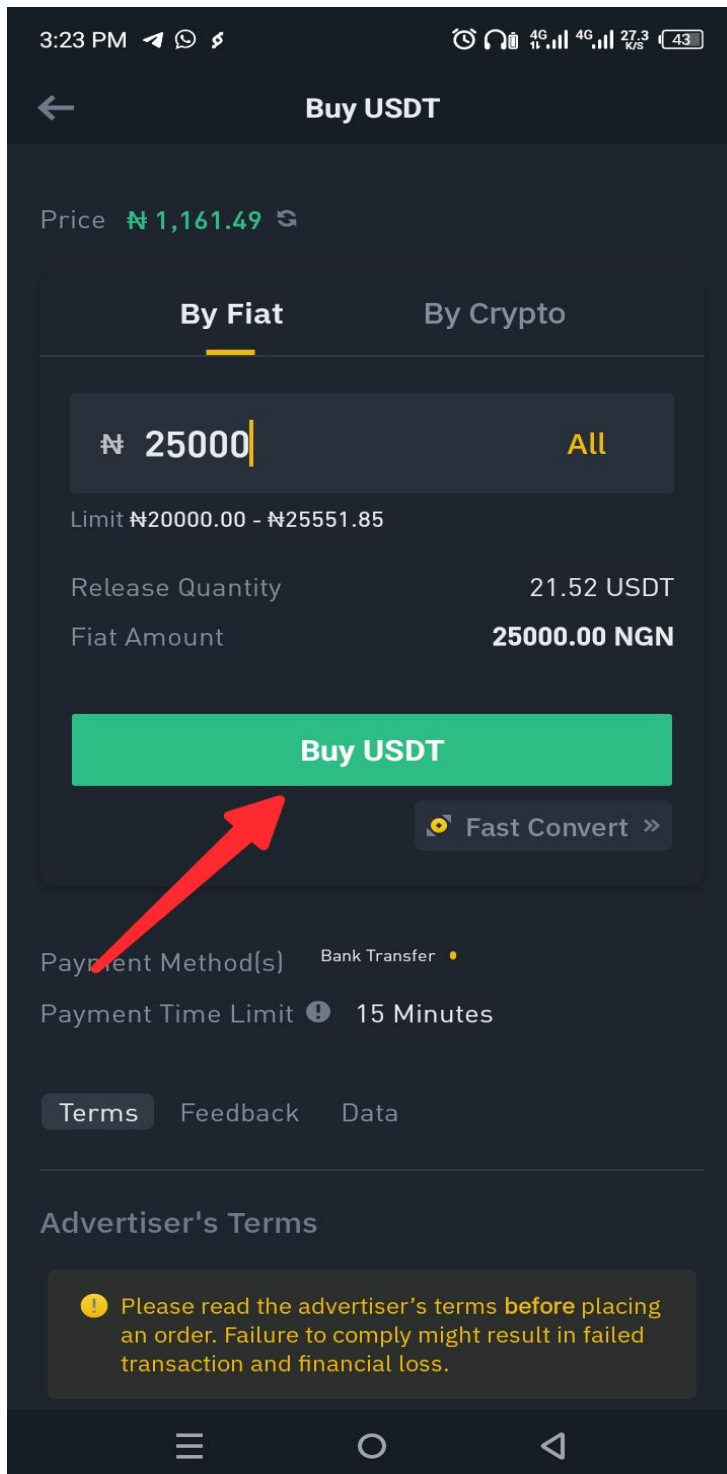

**Step 2:** Click the BUY icon close to the merchant you intend transacting with and enter the amount you want to buy.

**Step 3:** Click on BUY USDT to continue the transaction. You will be taken to the next page when you will be asked to confirm if you want to make payments.

Note that you're to check the vendor's terms and conditions and if necessary chat him the vendor on the message icon displayed close to the vendor's name.

**Step 4:** Copy the vendor's account details and transfer the payment to the account number displayed in the vendor's market page. When done, click on 'Transferred, Notify seller'. The seller will then confirm your transaction and release assets to your wallet address.

3:23 PM

Order will be cancelled in 14:34

₦25,000.00

Chat

Payment Info Tips

1 Manually transfer the payment to the seller using your selected payment platform with the info below.

Bank Transfer

Name ADEMUYIWA WAHEED BADMUS

Bank Account Number 8134475609

Bank name PALMPAY

Ref Message 20563185170311 577600

2 Ensure the payment is successful. then

Help Transferred, notify seller

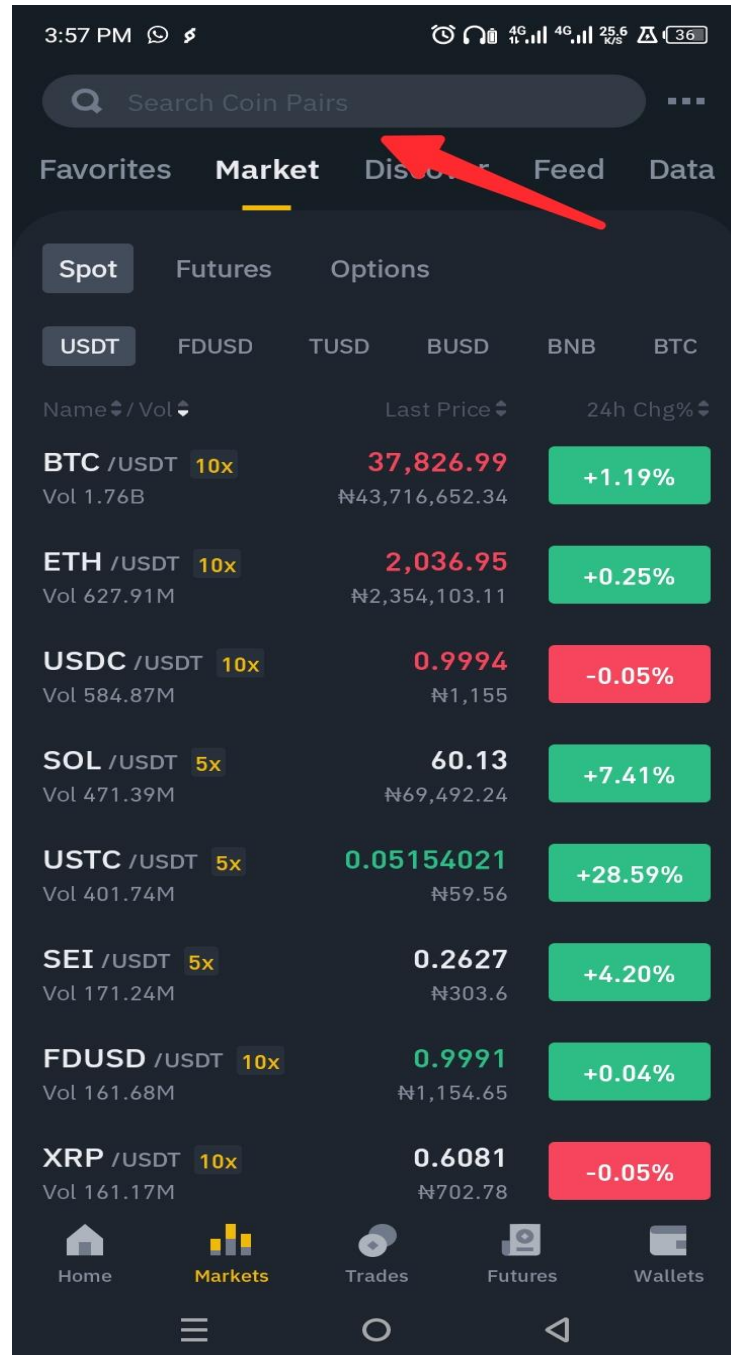

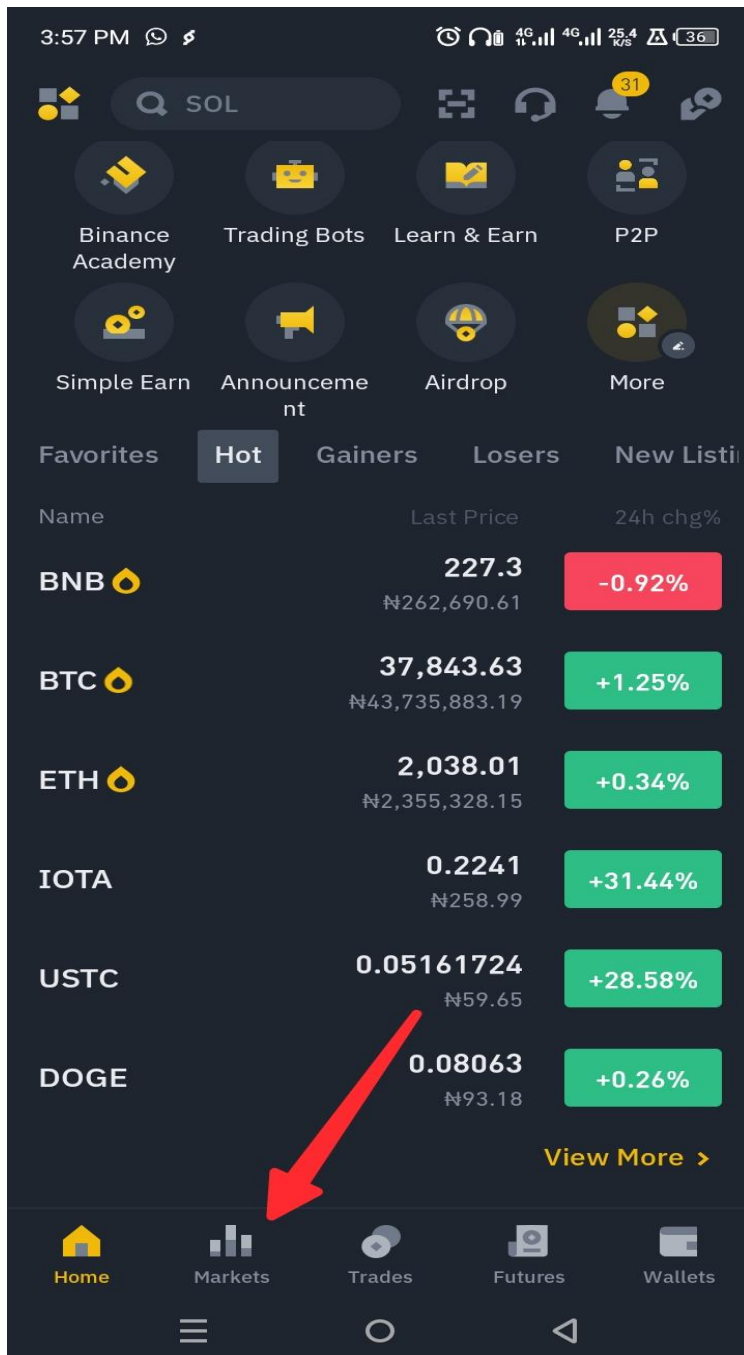

It is necessary/advisable to know that before any transaction is done, the account number you're transferring from should match your binance details. Using a third party account details might result in you losing the money to the seller, since there's no proper documentation in this case.

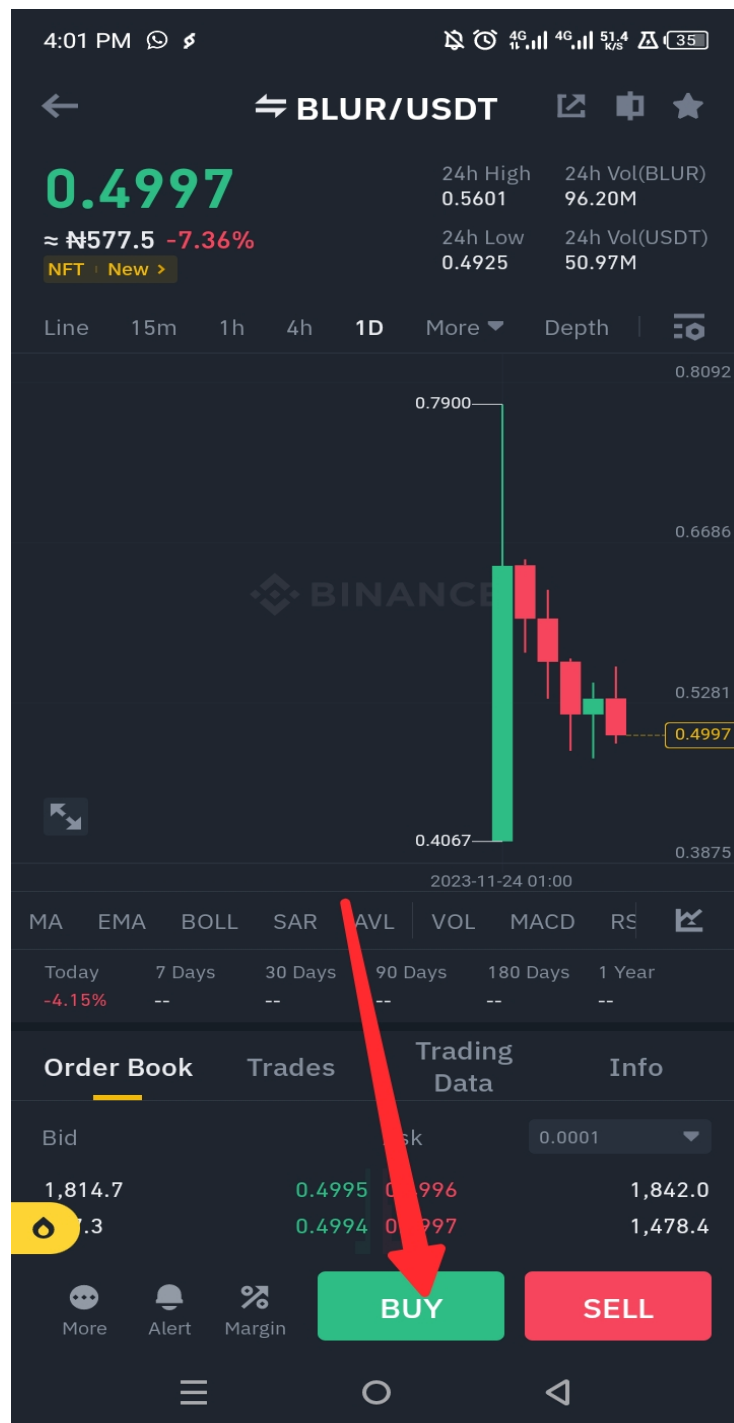

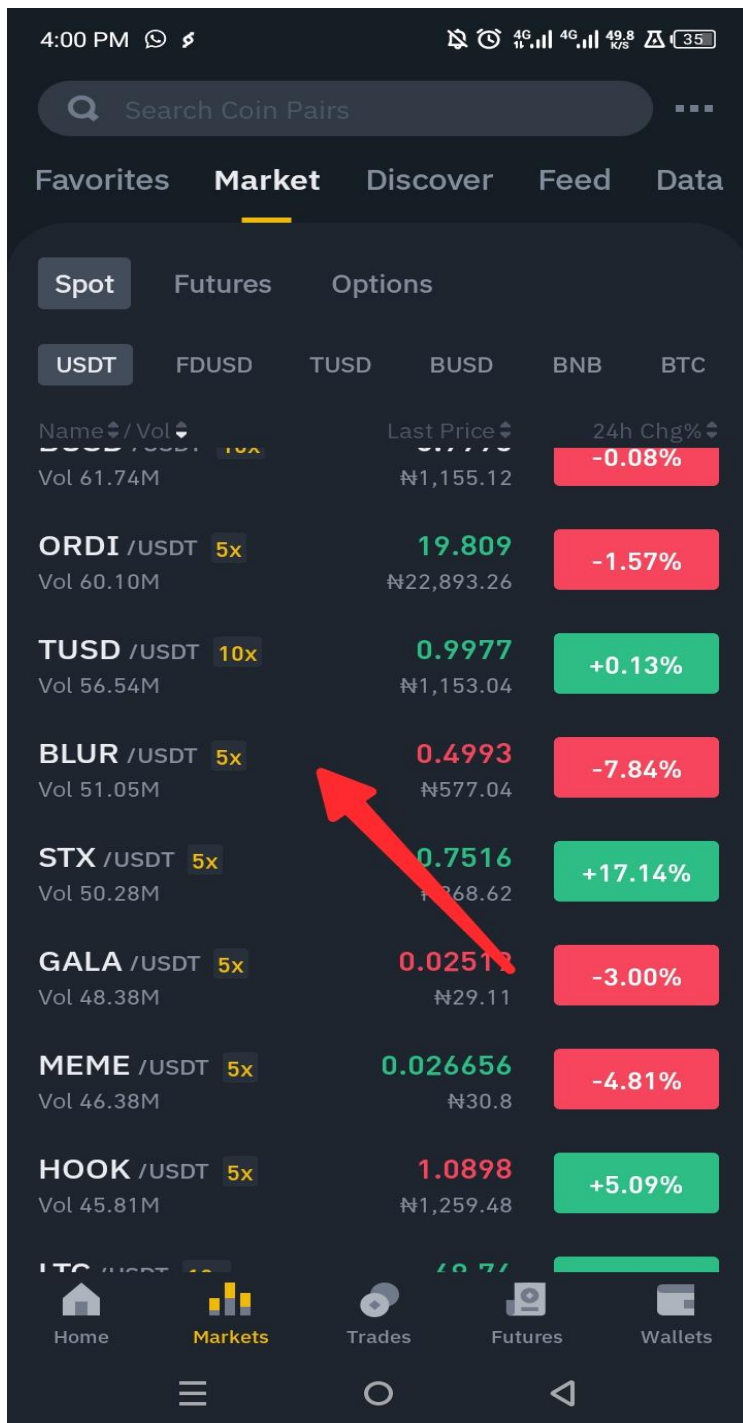

Same steps is needed if one wants to withdraw their money to their account.

1. Simply click on the p2p button on the homepage and select sell.
2. Locate your preferable vendor and click on sell
3. Enter the amount of USDT you want to sell of. Note, the bank account details you provided in your profile will be used to get the money, hence it is necessary that you provide and active and accurate account details.
4. The buyer would transfer the said amount to your account and then click the 'I have paid' option and you will be prompted by binance to release coin after confirming the transaction.

## How to buy a coin on Binance

**Step 1:** Open your binance app and click on trades, on the market page, search for the asset you want to buy and click on the asset name.(In this case I will be using Blurry).

**Step 2:** From the place labeled a to c kindly follow the rules.

A: Gives the market Execution instructions, this instructions can be

1. **Market Order:-** A market order lets you instantly place buy or sell orders for an asset at the best current market price available. With a market order, you don't have to input a stop loss or take profit.

b. You input the amount you want to spend on this trade in USDT.

c. Click on 'Buy Blur', to place the order and a confirmation page will be displayed for you, simply accept it to continue.

**2. Limit Order:-** A limit order is an order that you place on the order book with a specific limit price. It will not be executed immediately like a market order. Instead, the limit order will only be executed if the market price reaches your limit price (or better). Therefore, you may use limit orders to buy at a lower price or sell at a higher price than the current market price.

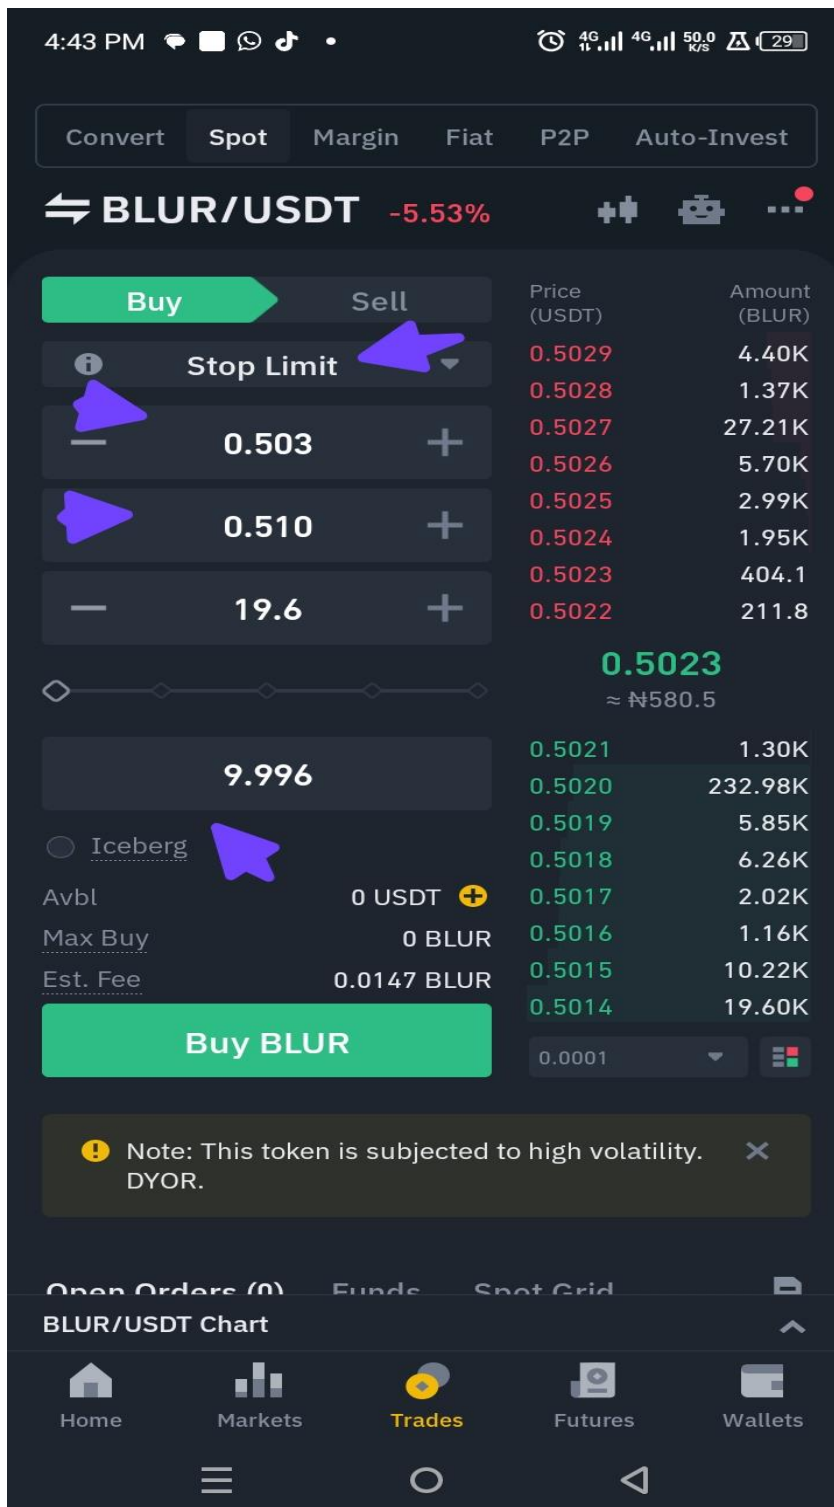

For example, you place a buy limit order for 1 BTC at \$60,000, and the current BTC price is 50,000. Your limit order will be filled immediately at \$50,000, as it is a better price than the one you set (\$60,000).

**Note:** In the picture, the Order has been changed to a buy limit Order and my price set to 0.4800, meaning I intend to buy into this market at that price. So when the price drops to that level, my order will be filled in.

Same thing applies for sell order. But in a sell limit order case, I set my take profit higher at 0.550.

**3 Stop-Limit Order:-** A stop-limit order has a stop price and a limit price. You can set the minimum amount of profit you're happy to take or the maximum you're willing to spend or lose on a trade. A limit order will be placed automatically when the trigger price is reached.

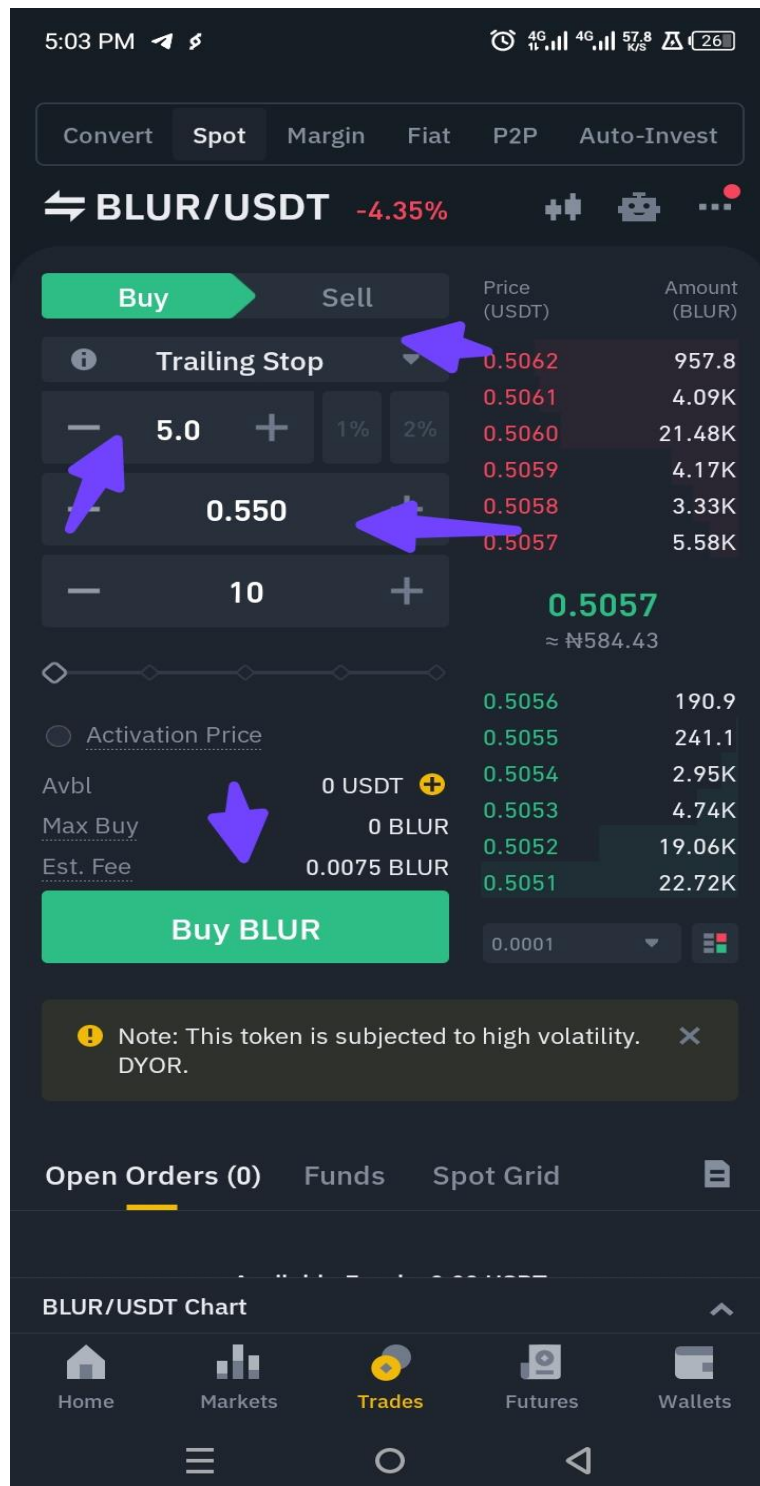

Let's assume I want to buy blur when the bullish trend kicks off, I set my price at 0.503 as a trigger price for my main entry, when the price enters that range, the market begins to look for a suitable entry area between 0.503 to 0.510 to fill my buy order depending on the suitable price it desires.

Same thing applies to the Sell Stop-Limit Order, you place your sell orders when you notice the market is moving against you, and want to cut losses later on. Let's say I entered the trade at 0.490 and currently at 0.495. I will set my sell order at the 0.493 to 0.490 price mark. This will trigger a sell when the market gets to that point and avoid me losing my Capital.

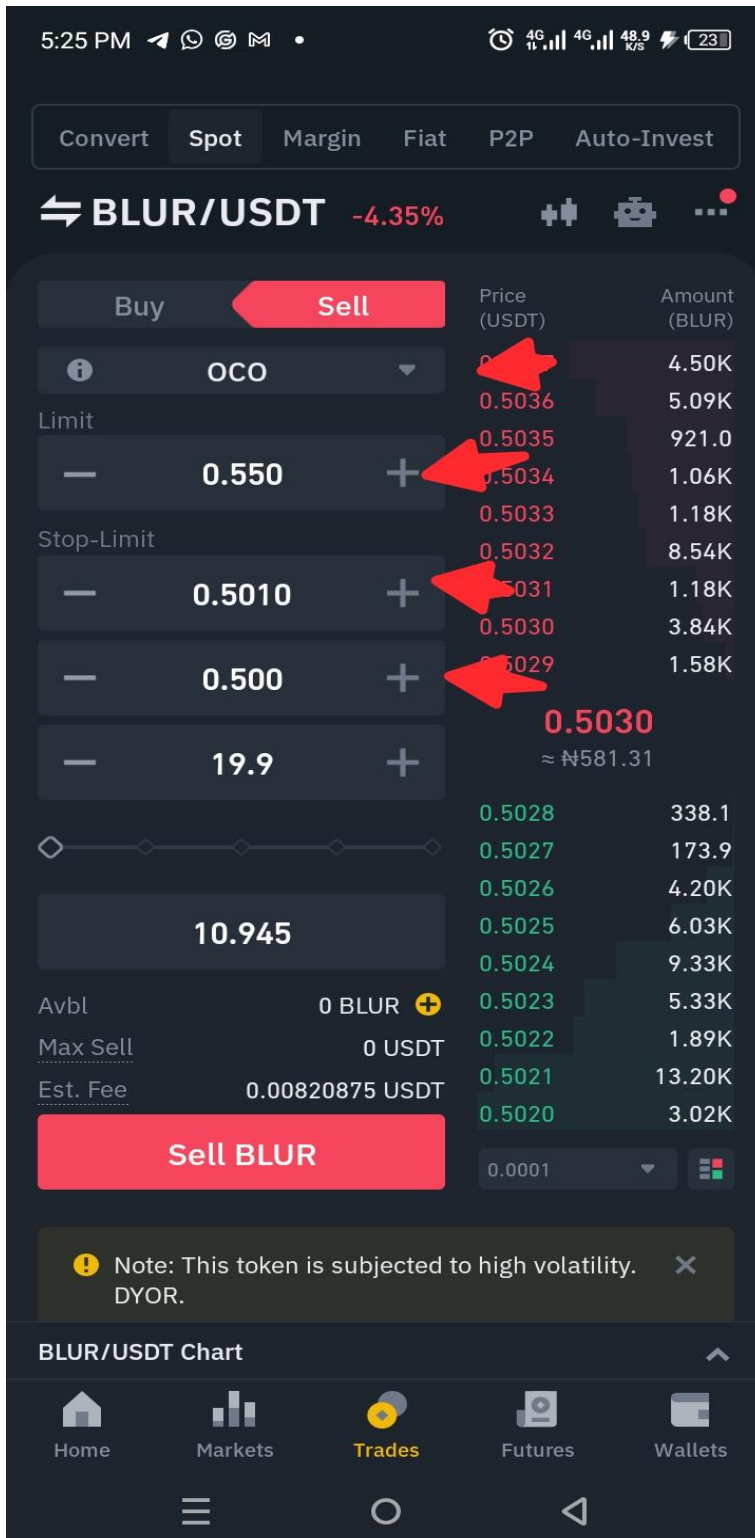

**4 Trailing Stop Order:-** A trailing stop order lets you place a pre-set order at a specific percentage away from the market price. It is especially useful when the market swings, which can help you limit the loss and protect gains when a trade does not move in a favorable direction.

For a long/buy trade, the selling price is supposed to be higher than the last price. When the price goes up, the trailing price moves up along with the last price and keeps a certain percentage interval. However, the trailing price will stop following if the price drops. A limit sell order will be placed on the order book if the price moves more than the predetermined trailing delta from its highest price and reaches the trailing price.

For a short/sell trade, the buy price is supposed to be lower than the last price. When the price drops, the trailing price moves downward with the last price and keeps a certain percentage interval. However, the trailing price will stop following if the price goes up. A limit buy order will be placed on the order book if the price moves more than the predetermined trailing delta from its lowest price and reaches the trailing price.

**5: One cancel the other(OCO):-** A one-cancels-the-other (OCO) order is a type of conditional order in trading that allows an investor to place two orders simultaneously, with one order being canceled when the other is executed.

An OCO kind of order is mainly preferable for selling orders.

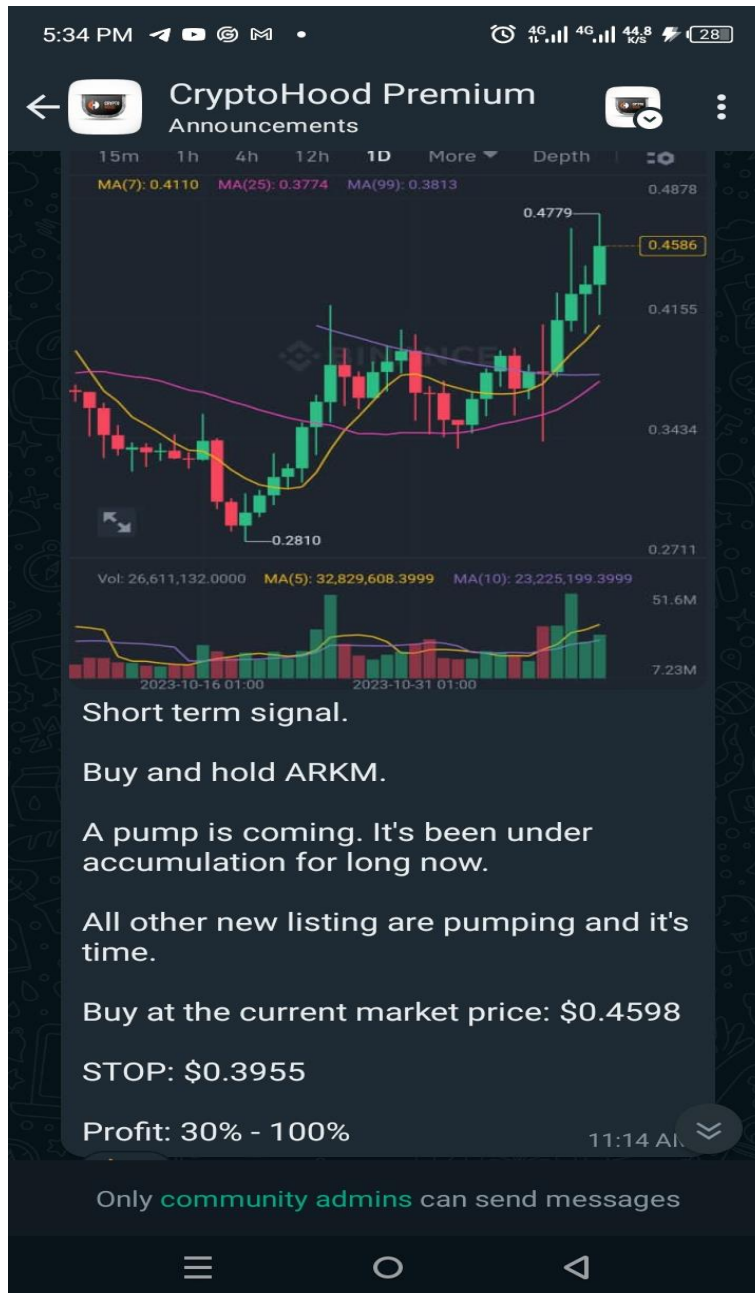

OCO stands for One Cancels Other, and as that implies, it allows the trader to place both a Take Profit exit (Limit Sell) and a Stop Loss (Stop Limit order) on the same coins. As soon as one of these orders is reached and filled, the other order is cancelled.

Our Limit price is 0.550 and the Stop limit price is 0.510 trigger price and a 0.500 stop.

## How to interpret signal when called

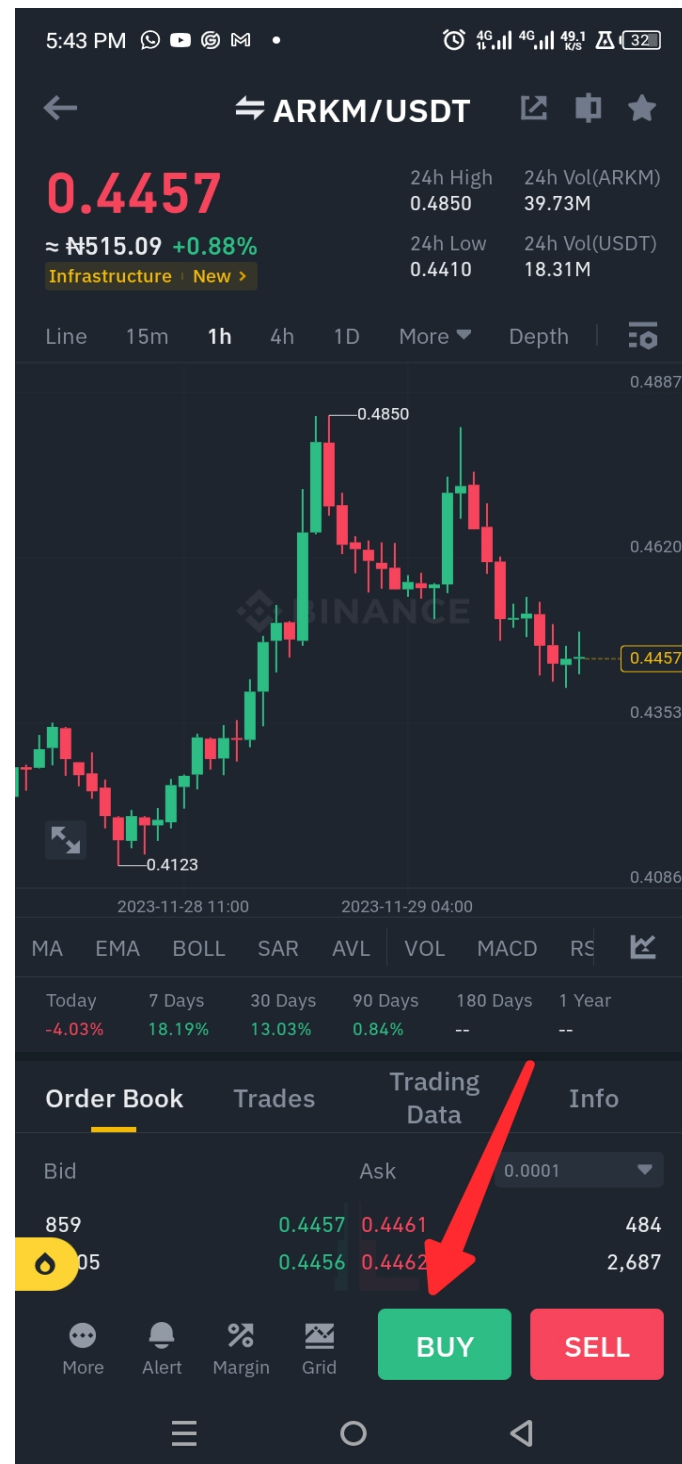

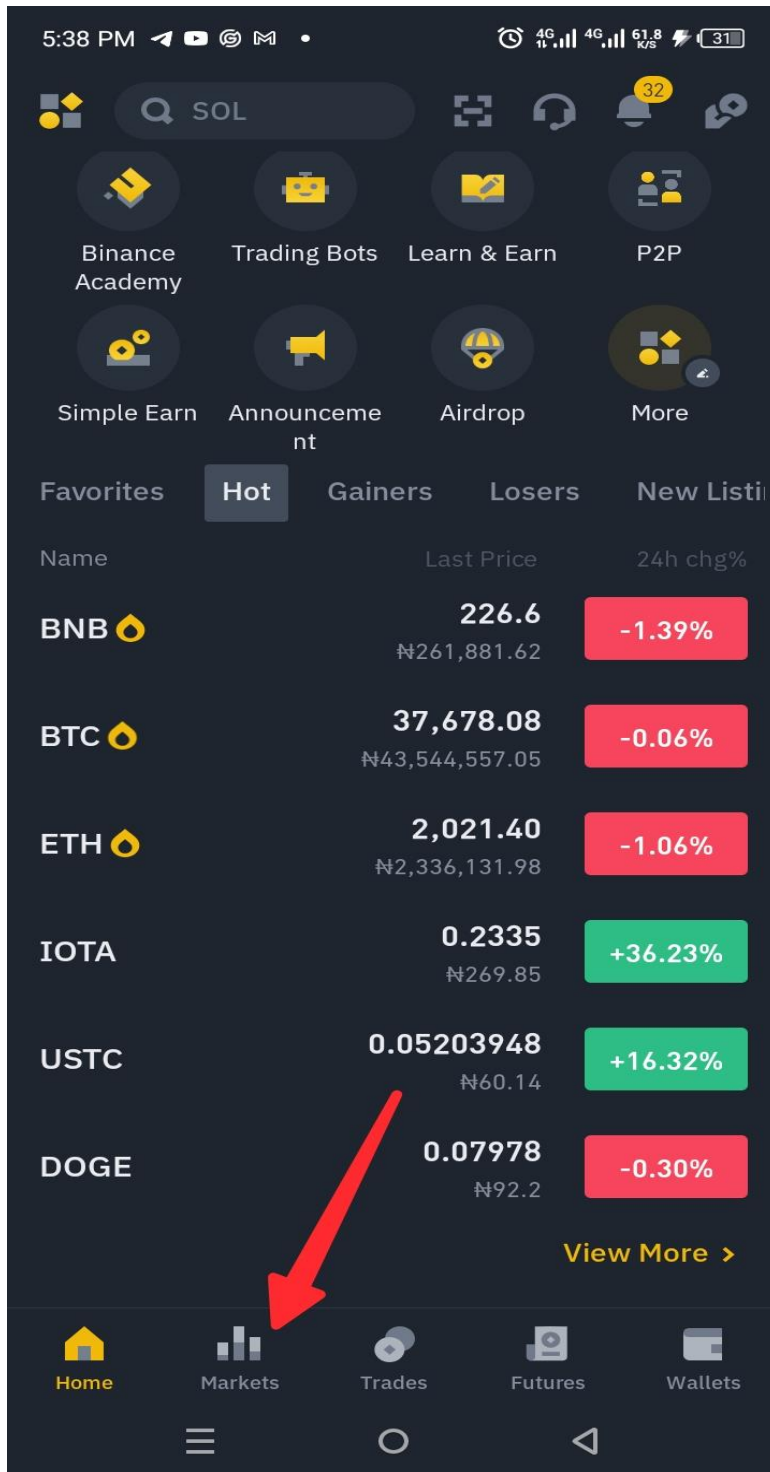

Given the below signal called by Mr Julius some time back.

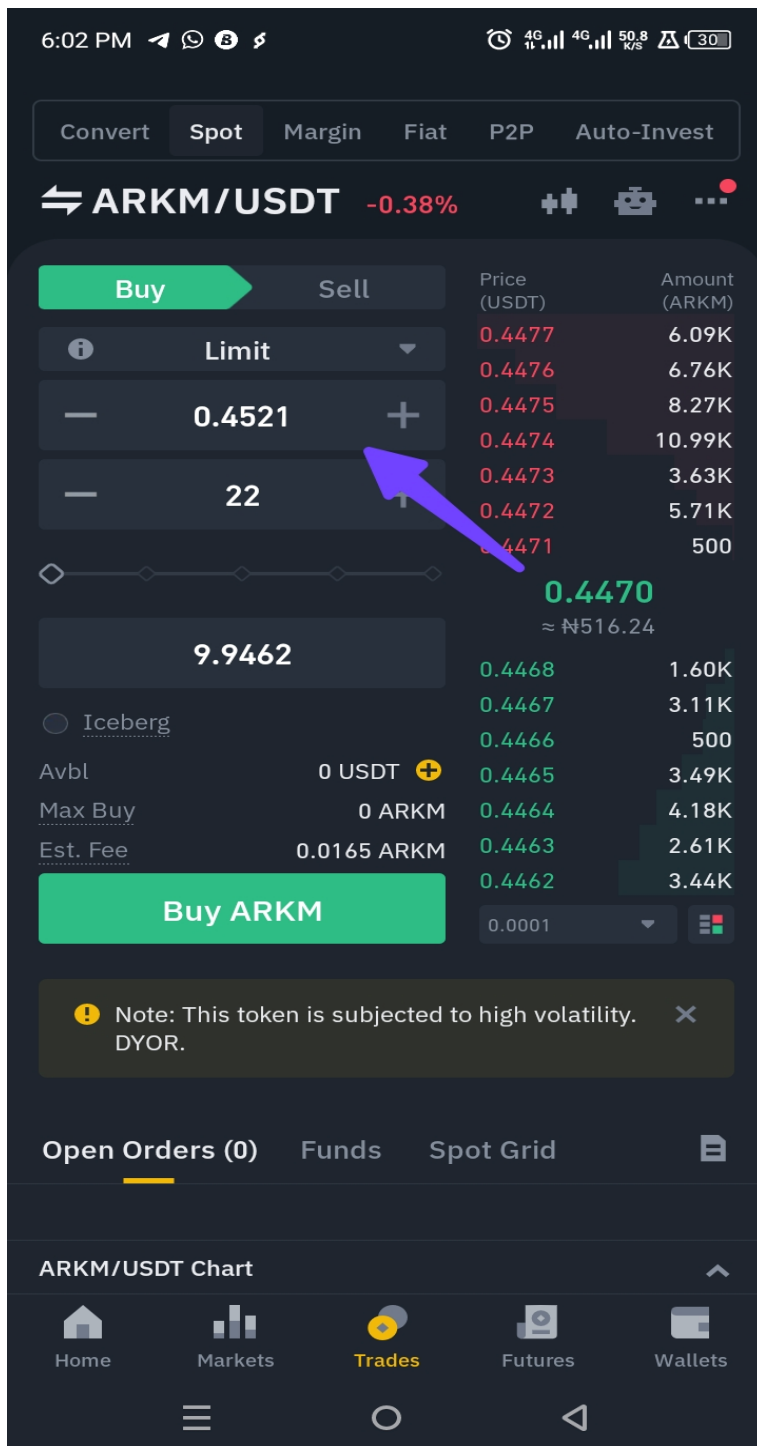

To be able to palce this signal, kindly follow the steps below.

**Step 1:** Open your Binance or bybit app or webpage and click on 'Markets' on the homepage.

**Step 2:** Search for ARKM and click on it, then click on buy.

After that, enter the amount and limit price you want to buy. In the case we're given a \$0.45 entry price, so we set our limit order to \$0.45.

It is important to know that the Limit price is a one way order and can be used one at a time, hence when your order is placed, you can then set you sell limit order to the stop loss given at \$0.3955.

When your order is in profit and you want to lock in some profit, you move the sell limit order to a take profit order of your choice.

**Step 3:** To set your stop loss, you can use either the limit order, stop limit order or the OCO (But OCO is the most preferable for locking in profit and setting stops).

Next fill in the stop loss mark price and click on sell.

To use OCO to control your trade and know where to set your stop loss and take profit simultaneously is the best.

## How to withdraw to your account

To withdraw to your account from an exchange, simply click on the wallets on Binance and click on Funding.

Step 2: Transfer your funds from spot wallet to your funding wallet.

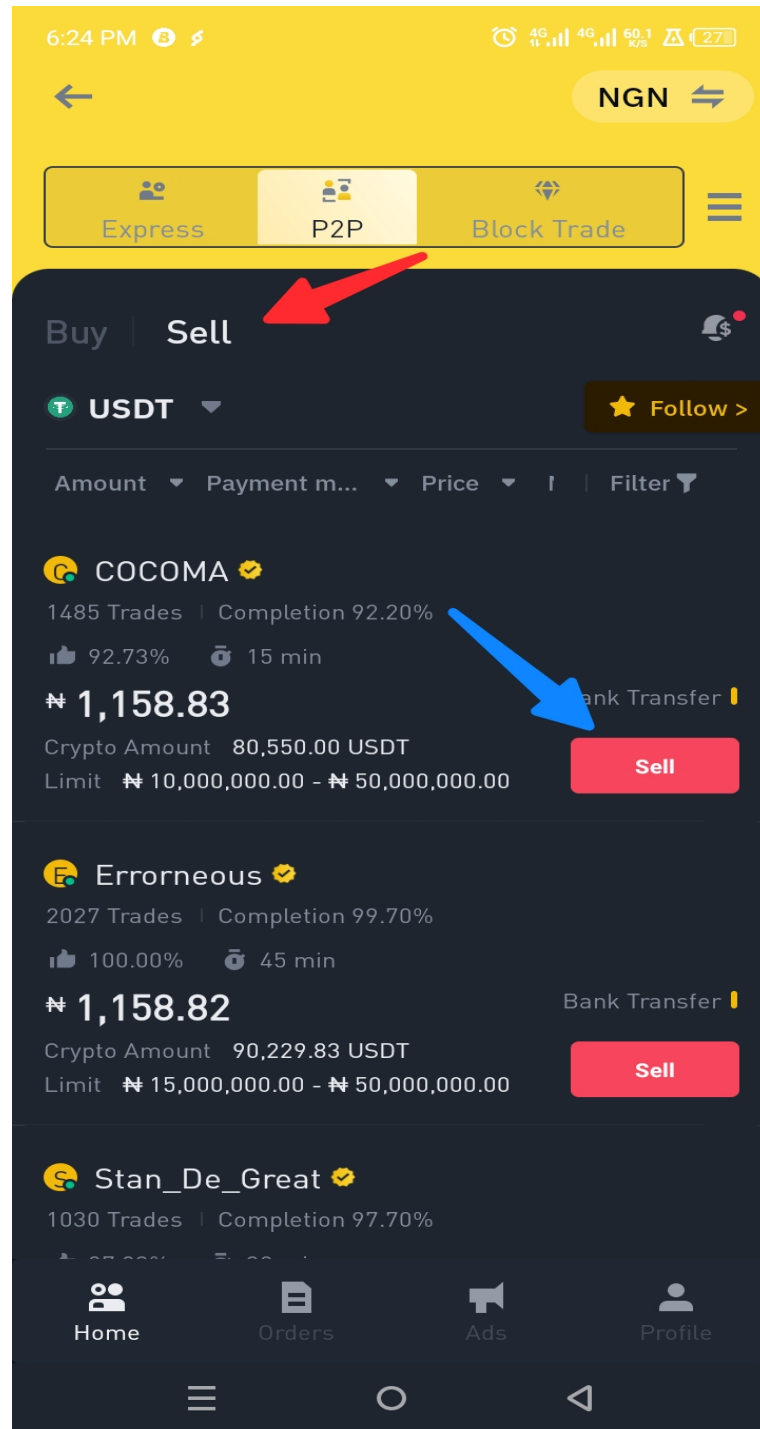

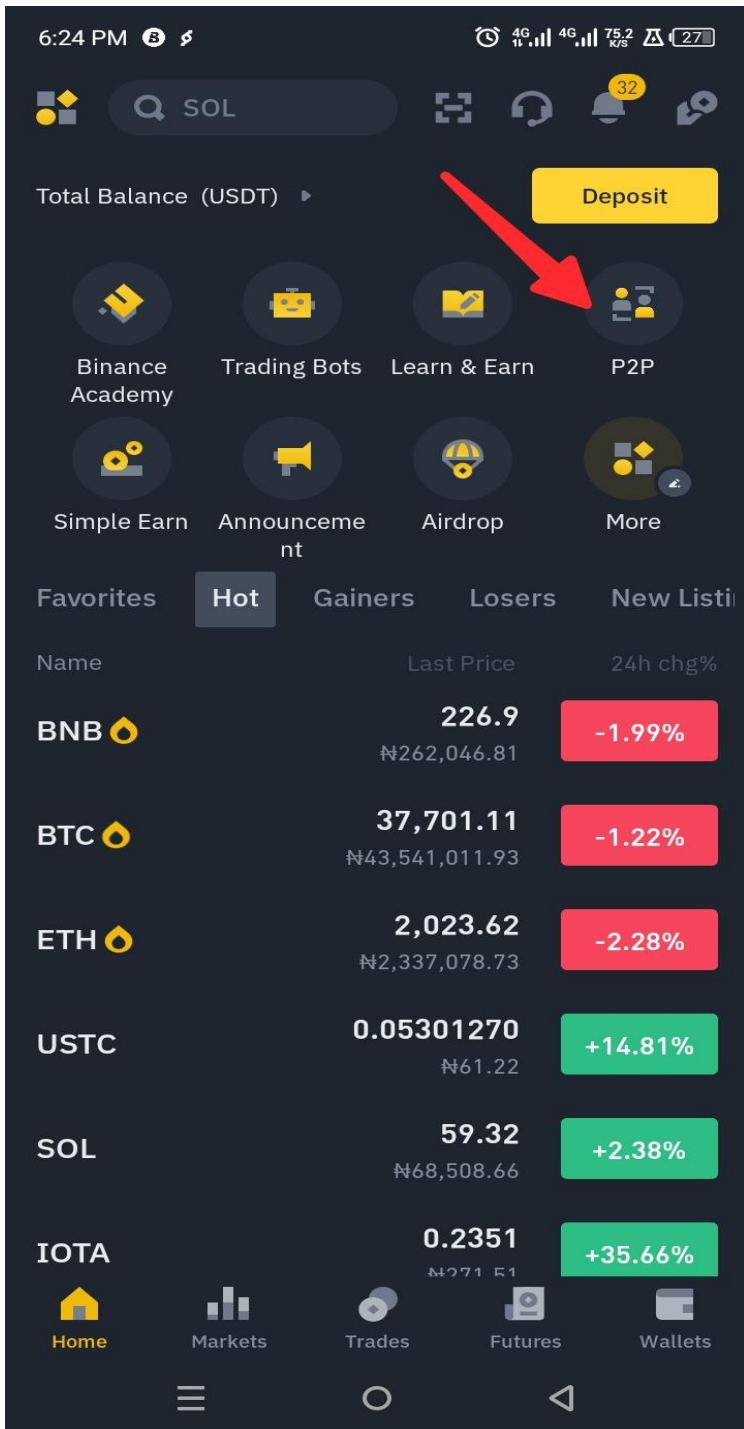

Step 3: Click on Transfer and set the spot wallet up and funding down (which means you're moving money from spot to funding).

Enter the amount of USDT to be transferred and click confirm.

Step 4: Go to the Binance homepage and click on p2p and click sell. Select your desired vendor and click on the sell button by the vendor's name.

Step 5: Enter the Amount you want to sell and then fill in your bank details and click 'Sell USDT'.
