

LIST OF 50 MUST-HOLD BULL MARKET PROJECTS

I will start by saying.

The crypto market is profusely confusing.

That's because there exist lots of projects in the market so much so that you would be confused about which to buy.

According to coinmarketcap.com, there are over 2 million crypto assets in the market right now.

Since such a number of projects exist, tell me how much capital you need to buy all of them.

Endless capital.

This is why the knowledge of what to buy is more important than buying.

Yes, I know you have been lied to that in a bull market every crypto project pumps, but that's not true.

There are lots of projects that won't make an inch movement upward.

The fact is, many projects will even dump and dump till zero.

This is why this list of 50 Must-hold projects is highly important.

This project wasn't listed out of guesswork, it's a product of over 6 months of research.

First, before buying a project for the bull market.

You would have to follow the market in narratives.

At each bull market, there exist certain narratives that pump and there exist certain narratives that pump more than other narratives depending on what is trending and what is new.

In the bull market of 2017, DeFi projects pumped madly because the DeFi ecosystem just came to the limelight.

In the bull market of 2021, both DeFi, Layer 1&2 projects pumped including NFT ecosystem and metaverse.

Right now, what ecosystem do you think will pump in this coming bull market?

To answer the question we have to take three things into consideration:

(1) What ecosystem is trending

(2) Which ecosystem is NEW - bringing new innovations to the industry

(3) Which ecosystem are big players in the industry talk about Often.

To begin with.

We are already aware that the ticking point for the incoming bull market is BTC halving and ETF.

But before the BTC halving and ETF hype as the trigger for the bull market, Web3, Ai, and SociFi ecosystem has been the hype.

Don't also forget that DeFi didn't lose its hype but more concentration and focus on the three mentioned above ecosystem systems.

To make money in a bull market, you don't stick with the old, you identify where the trend has moved to and follow the trend.

That's how you make huge profits in the bull market.

Be it as it may, we won't talk about Bitcoin ETFs without talking about the Bitcoin ecosystem itself.

As such, just like other ecosystems will pump hard, BTC ecosystem will also pump because of ETFs and halving.

By the way, recently, as recently as last month (OCTOBER). A new narrative and ecosystem was launched into the market and the trend started.

Which ecosystem is that?

The BRC20 Blockchain - the Ecosystem is built for the tokenization of real-world assets. It was launched in October and the leading project is ORDI followed by some other projects which aren't listed on Binance yet, but MEME was one of the first projects to be launched on the BRC20 Blockchain network.

Comprehensively, there exist 7 ecosystem narratives that I strongly believe will pump in this incoming bull market:

(1) Web3 ecosystem

(2) Ai ecosystem

(3) SociFi ecosystem

(4) DeFi and DeFi 2.0 ecosystem

(5) Bitcoin ecosystem

(6) BRC20 Blockchain Ecosystem which is built for the tokenization of real-world assets.

(7) Hybrid exchange ecosystem.

These 7 ecosystem narratives would guide what projects to buy and what projects to ignore.

The list of 50 Must-hold projects will all come from the 7 narratives, just a few projects will come from a few other ecosystems not listed as the 7 ecosystems we have an interest in like the Hong Kong narratives and others.

Below is the list of projects that you must hold.

(1) ORDI

(2) TIA

(3) MEME

(4) LQTY

(5) FLM

(6) TIP

(7) PYTH

(8) AGIX

(9) PIVX

(10) RNDR

(11) APT

(12) SEI

(13) PEPE

(14) FLOKI

(15) PYR

(16) PHB

(17) HFT

(18) SHIB

(19) CHR

(20) POLS

(21) CFX

(22) ACH

(23) KEY

(24) CAKE

(25) ROSE

(26) COTI

(27) STPT

(28) CYBER

(29) IDEX

(30) DODO

(31) THETA

(32) YFI

(33) ATOM

(34) QTUM

(35) ETC

(36) ARPA

(37) OAX

(38) CREAM

(39) VIB

(40) MDT

I will stop here on the list.

The remaining 10 projects will be called on the eBook WhatsApp group – it's going to be the most parabolic on the list.

NOTE: Entries, stop-loss, and take Profit including profit potentials of these projects will be called on the eBook WhatsApp group.

Other updates like the 10 Must-Hold for small capital holders will also be shared in the group.

Likewise, I will also share a strategy on how to make a huge profit as a small capital investor in the group.
